Adi Jain

Personal Details

CSE UnderGrad — AI/ML Engineer — Python Developer — LLMs & Full-Stack Development

+91-8630497191 • adi1510jain@gmail.com • Portfolio • Adi15Jain • Meerut, India

I work across AI, ML, and full-stack development, mainly building LLM pipelines, RAG systems, and clean APIs. I focus on practical, end-to-end solutions — from data work and modeling to FastAPI backends and React/Next.js frontends. I enjoy figuring things out on my own, keeping things simple, and delivering work that actually solves a problem.

Education

Bachelor of Technology in Computer Science Engineering — August 2022 – Present
Artificial Intelligence, Machine Learning, and Deep Learning. — ***Teerthanker Mahaveer University***
Moradabad, India
GPA: 8.52 / 10.00 (Current)

Senior High School — April 2018 – July 2022
Science (Physics, Chemistry, Mathematics) — ***St. John's Senior Secondary School***
Meerut, India
CGPA: 8.2 / 10

Experience

Data Science Intern | EvoAstra Ventures Private Limited — September 2025 – December 2025
Exclusive Project – Telecom Customer Churn Prediction — ***Remote, India***

- Developed a churn prediction pipeline on a **70k+** telecom dataset, including cleaning, EDA, and key Feature Engineering.
- Trained and compared ML models (Logistic Regression, Random Forest, XGBoost, LightGBM) with imbalance handling.
- Built deployable assets including a preprocessing pipeline, trained model, and a prediction API/dashboard.

Artificial Intelligence Intern | CETPA Infotech Private Limited — June 2024 – August 2024
Exclusive Project – Sentysis (Twitter Sentiment Analysis) — ***Noida, India***

- Developed a sentiment-analysis system using Python, NLP, and ML models, improving classification performance by **18%** through feature engineering and tuning.
- Implemented SVM, Decision Tree, PCA-based dimensionality reduction, and clustering algorithms for comparative model evaluation.
- Designed preprocessing pipelines and evaluation workflows for text data, enhancing accuracy, stability, and reproducibility.

Skills

Programming Languages

Python, JavaScript (ES6+), C++

Frameworks & Libraries

FastAPI, Flask, ReactJS, NextJS, NodeJS, ThreeJS, TailwindCSS, AntDesign

Cloud & Deployment

Vercel, Render, GitHub Actions, REST APIs, Environment Variable Management

Developer Tools

Git, GitHub, VS Code, Jupyter Notebooks, Vite, Perplexity, ChatGPT, Groq, Canva

AI & Machine Learning

Scikit-learn, XGBoost, LangChain, NLP, CNNs

Database Management

MySQL, PostgreSQL, SQLite, MongoDB (basic), MongoDB Atlas

Data Processing & Analysis

NumPy, Pandas, Data Cleaning, Text Preprocessing, Feature Engineering

Soft Skills

Communication, Teamwork, Leadership, Problem-Solving, Adaptability, Time Management

Selected Projects

Some of my projects are publicly available on **GitHub.** You can also click here to see my **Portfolio.**

Interviewpilot – AI Mock Interview Platform | *Next.js — Vapi — NeonDB — MediaPipe* February 2026

- Architected a full-stack AI mock interview platform using **Next.js** and **Vapi**, facilitating real-time voice interactions and dynamic, role-specific question generation.
- Integrated **MediaPipe** for continuous behavioral analysis, processing webcam video streams to track micro-expressions and deliver comprehensive post-interview emotional feedback.
- Developed a gamified analytics dashboard with **Recharts** and **Prisma ORM**, dynamically calculating global percentile ranks and visualizing skill progression via interactive radar charts.

CoinPush – Crypto Screening App | *NextJS — WebSockets — SWC* January 2026

- Built a real-time cryptocurrency screening platform using **Next.js App Router** and the **CoinGecko API**.
- Implemented interactive candlestick charts and live price updates via **WebSockets**, improving market visibility and reducing manual refresh dependency.
- Designed a **Cmd + K / Ctrl + K command-palette search** with debounced **SWR** queries, preventing API rate-limit issues and ensuring race-condition-free data fetching.

PneumoAI – Pneumonia Detection System | *Python — FastAPI — ReactJS* June 2025

- Developed a CNN-based classifier achieving **92% accuracy** on chest X-ray pneumonia dataset.
- Integrated real-time predictions via a FastAPI backend and React/Vite frontend, with response times under **500 ms**.
- Built noise-reduction and normalization pipeline improving model performance by **12%**.
