

ADI JAIN

PERSONAL DETAILS

CSE Undergraduate — AI/ML Engineer — Python Developer — LLMs & Full-Stack Development

+91-8630497191 • adi1510jain@gmail.com • LinkedIn • Portfolio • GitHub • Meerut, India

AI/ML Engineer and Full-Stack Developer with hands-on experience in building and deploying production web applications, predictive ML pipelines, and real-time systems. Proven track record of delivering a **45%** page-load reduction for a university platform serving 150+ programs, engineering time-series forecasting pipelines, and architecting containerized microservices incorporating WebSockets, client-side computer vision, and semantic search RAG architectures.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Artificial Intelligence, Machine Learning, and Deep Learning.

Moradabad, India

GPA: 8.52 / 10.00 (Current)

August 2022 – May 2026

Teerthanker Mahaveer University

Senior High School

Science (Physics, Chemistry, Mathematics)

Meerut, India

CGPA: 8.2 / 10

April 2018 – July 2022

St. John's Senior Secondary School

EXPERIENCE

Web Developer | Teerthanker Mahaveer University

University Homepage Redesign

February 2026 – May 2026

Moradabad, India

- Cut page load time by **45%** by implementing adaptive HLS streaming, asset preloading, and lazy-loaded DB queries via IntersectionObserver API.
- Redesigned the university homepage (Laravel) serving **150+** academic programs, boosting average session duration by **28%** through improved information architecture and responsive design.

Data Science Intern | EvoAstra Ventures Private Limited

Telecom Customer Churn Prediction

September 2025 – December 2025

Remote, India

- Built a market-level time-series churn pipeline on **1,700 records** (TRAI data), engineering 40+ temporal and competitive features to predict circle-level subscriber decline (5% Month-over-Month).
- Trained and benchmarked **4 ML models** (Logistic Regression, Random Forest, XGBoost, LightGBM) with SMOTE-based class rebalancing; XGBoost achieved the best F1 score across all candidates.
- Delivered deployable assets: scikit-learn preprocessing pipeline, serialized model artifact, and a FastAPI prediction endpoint.

Artificial Intelligence Intern | CETPA Infotech Private Limited

Sentysis — Twitter Sentiment Analysis

June 2024 – August 2024

Noida, India

- Developed a sentiment-analysis system using Python, NLP, and ML models, improving classification performance by **18%** through feature engineering and hyperparameter tuning.
- Implemented SVM, Decision Tree, PCA-based dimensionality reduction, and clustering algorithms for comparative model evaluation.
- Designed preprocessing pipelines and evaluation workflows for text data, enhancing accuracy, stability, and reproducibility.

SKILLS

Programming Languages: Python, JavaScript (ES6+), TypeScript, C++
AI & Machine Learning: Scikit-learn, XGBoost, LangChain, NLP, CNNs, RAG
Frameworks & Libraries: FastAPI, Flask, ReactJS, Next.js, Node.js, Three.js, TailwindCSS, Ant Design
Databases: MySQL, PostgreSQL, SQLite, MongoDB, MongoDB Atlas
Cloud & Deployment: Vercel, Render, GitHub Actions, REST APIs, NeonDB
Data Processing & Analysis: NumPy, Pandas, Data Cleaning, Text Preprocessing, Feature Engineering
Developer Tools: Git, GitHub, Jupyter Notebooks, Vite

SELECTED PROJECTS

Interviewpilot – AI Mock Interview Platform | *Next.js, Vapi, NeonDB, MediaPipe* February 2026

- Architected a full-stack AI mock interview platform using **Next.js** and **Vapi**, facilitating real-time voice interactions and dynamic, role-specific question generation.
- Integrated client-side **MediaPipe Face Mesh** and **Vapi voice AI** to track expressions and conduct real-time mock interviews, generating feedback reports in **NeonDB**.
- Architected a Dockerized FastAPI microservice running a **4-model ML pipeline** (regression, clustering, anomaly detection) to predict user scores and archetypes (silhouette greater than 0.35).
- Developed a gamified analytics dashboard with **Recharts** and **Prisma ORM**, dynamically calculating global percentile ranks and visualizing skill progression via interactive radar charts.

CoinPush – Crypto Screening App | *Next.js, WebSockets, SWC* January 2026

- Built a live crypto screener with WebSocket-driven candlestick charts and real-time price feeds using Next.js and CoinGecko API, eliminating manual refresh cycles.
- Implemented debounced **Cmd+K / Ctrl+K** command-palette search via SWR, preventing API rate-limit breaches and race conditions under high query load.

TeleChurn – Telecom Market Share Churn Predictor | *Python, FastAPI, Streamlit, XGBoost, Optuna* December 2025

- Architected an Optuna-optimized time-series ensemble (XGBoost, Random Forest, Logistic Regression) with SMOTE rebalancing, achieving **87.2%** accuracy and **0.89 ROC-AUC** predicting circle-level subscriber decline.
- Built a Streamlit simulation dashboard and FastAPI microservice prescribing regional retention playbooks, projecting **300%–500%** ROI on INR 2.5B revenue-at-risk.

PneumoAI – Pneumonia Detection System | *Python, FastAPI, ReactJS* June 2025

- Developed a CNN-based classifier achieving **92% accuracy** on a chest X-ray pneumonia dataset.
- Integrated real-time predictions via a FastAPI backend and React/Vite frontend, with response times under **500ms**.
- Built a noise-reduction and normalization pipeline improving model performance by **12%**.

Exyst – AI Exam Paper Analyzer | *Python, Next.js, LangChain, RAG* 2025

- Developed a 6-stage pdfminer extraction pipeline and LLM page-classifier to automatically sort syllabus and question paper pages with **95%** accuracy.
- Architected a RAG pipeline over academic PDFs for context-aware question synthesis with Python and Next.js, targeting competitive and university exam preparation.
