PROFESSIONAL SUMMARY

Results-driven AI/ML Engineer with hands-on experience building scalable, production-grade systems spanning LLM pipelines, RAG architectures, and full-stack applications. Proficient in deploying ML models end-to-end and integrating FastAPI backends with React/Next.js frontends. Passionate about performance optimization and shipping robust, impactful solutions.

WORK EXPERIENCE

Teerthanker Mahaveer University — *Web Developer* Feb 2026 – May 2026

- Redesigned and architected the university's flagship homepage using Laravel, streamlining program discovery across **150+** academic paths to increase average session duration by **28%**.
- Slashed homepage load times by **45%** by implementing adaptive HLS streaming, preloading assets, and lazy-loading dynamic database queries via the **IntersectionObserver API**.

EvoAstra Ventures Private Limited — *Data Science Intern* Sept 2025 – Dec 2025

- Engineered a churn prediction pipeline on a **70k+** telecom dataset, encompassing data cleaning, exploratory data analysis, and targeted feature engineering.
- Benchmarked and optimized ML models (Logistic Regression, Random Forest, XGBoost, LightGBM) with class-imbalance handling, achieving best-in-class prediction accuracy.

PROJECTS

Interviewpilot — **AI Mock Interview Platform** interview-pilot-web.vercel.app

- Architected a full-stack AI mock interview platform with integrated MediaPipe for real-time behavioral analysis, processing live webcam streams to track micro-expressions and generate comprehensive post-interview emotional feedback reports.
- Built a gamified analytics dashboard using Recharts and Prisma ORM, dynamically computing global percentile rankings and visualizing skill progression through interactive radar charts.
- Tech Stack:** Next.js, Vapi, NeonDB, MediaPipe, Recharts, Prisma ORM

CoinPush — **Real-Time Crypto Screening App** coin-push.vercel.app

- Developed a real-time cryptocurrency screening platform featuring interactive candlestick charts and live price feeds via WebSockets, eliminating manual refresh dependency and improving trader decision velocity.
- Implemented a **Cmd+K / Ctrl+K** command-palette search with debounced SWR queries, effectively preventing API rate-limit breaches and ensuring race-condition-free data fetching.
- Tech Stack:** Next.js, WebSockets, CoinGecko API, SWR, SWC

ACHIEVEMENTS & CERTIFICATIONS

Certifications:

- Artificial Intelligence for Intermediate — [IBM Skills Network](#)

Academic Achievements:

- Maintaining GPA **8.52 / 10.00** in B.Tech (CSE) with specialization in Artificial Intelligence, Machine Learning, and Deep Learning.
- Completed Senior Secondary (Science: Physics, Chemistry, Mathematics) with CGPA **8.2 / 10**.

SKILLS AND EXPERTISE

Languages: Python, JavaScript (ES6+), C++

Frameworks & Libraries: FastAPI, Flask, ReactJS, Next.js, Node.js, Three.js, TailwindCSS, Scikit-learn, XGBoost, LangChain, NLP, CNNs

Databases: MySQL, PostgreSQL (NeonDB), MongoDB, MongoDB Atlas

Tools & Technologies: Git, GitHub, VS Code, Jupyter Notebooks, Vite, REST APIs, GitHub Actions, Groq, Perplexity, Canva

Cloud & Deployment: Vercel, Render, GitHub Actions
